HAIR LOSS RESTORATION

Hair loss is a very common issue for men and women. It severely affects the way you feel about yourself, and your confidence levels. This affects the quality of your life and your relationships. The frustrating part for most people is that it is mostly genetic.

Genetics paired up with today's fast paced lifestyle, high stress environment at work, lack of sleep, and a poor diet, really speeds up the balding process.

OUR SOLUTION FOR YOU

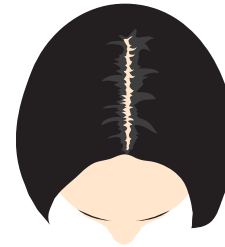

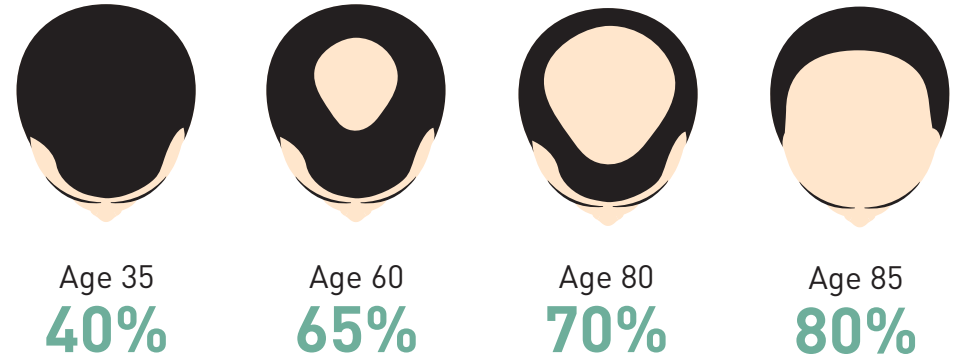

PRP (Platelet-Rich Plasma) is the most economical and effective option for hair restoration, which involves a simple injection of your own platelets back into the affected areas of your scalp.

Benefits of PRP for Hair Restoration

- Increases blood flow to the scalp
- Restores balding, and thinning hair
- Increases thickness of hair
- Promotes & controls the natural growth cycle
- Decreases loss of hair
- Preventative for hair loss in the future

THE FACTS

Percentage of men who have noticeable hair loss

80% OF WOMEN
will have noticeable hair loss by age 60

811,363
number of hair loss
sufferers world-wide, seeking
professional treatment.

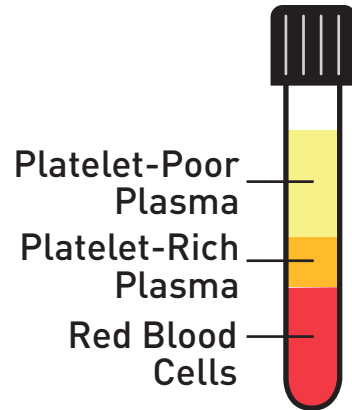

35 MILLION
number of U.S men
experiencing hair loss

21 MILLION
number of U.S women
experiencing hair loss

HOW DOES PRP WORK?

Simply put, when you get injured by a cut, Platelets are the cells that clot your blood and tell your body's tissue to heal and grow. Due to their healing functions, many fields of medicine have started utilizing Platelet Rich Plasma (PRP) as a natural way to speed up recovery and promote the growth of healthier tissue in less time.

Doctors recently discovered the benefits of PRP for hair restoration by using your body's natural growth factors to repair and stimulate new hair growth. Therefore, this is the most natural way to regrow your hair without medication or surgery.

A SIMPLE 3 STEP PROCESS:

- 1** A nurse will collect a small amount of blood (into a special PRP tube)
- 2** The tube is placed into a centrifuge machine that spins. (During this process the blood will separate into 3 distinctive layers. One of the layers will be PRP)
- 3** PRP is injected into the hair loss areas

FAQS

Q. How long does PRP take?

A. Each appointment takes about 45 min.

Q. How many treatments will I need before I can see results?

A. About 3 sessions, each session 1 month apart. However, this does depend on the health of the client.

Q. Is the procedure painful?

A. Most people would rate the pain only 2/10.

Q. Who administers the treatment?

A. A registered nurse. First treatment will have a consultation with a medical director.

Q. What is the recovery time after this procedure?

A. The best part about PRP is that there is no downtime or recovery process after PRP. It is best not to wash your hair or exercise for 48 hours after your treatment.

Q. How do I know if I am a candidate for PRP?

A. Every patient is different. We will let you know if you're a candidate during a consultation.

Q. Does PRP cure advanced stage balding?

A. No, because PRP works on hair follicles that are still there. If the hair follicle is not present anymore, there is nothing to restore. This procedure is best to restore thinning hair, prevent or slow down balding.
